

Techno Curling

Welcome!

The "TECHNO" Logical Curling Brush!

Features:

- ✚ This technological advancement is an alternative to the synthetic nylon fabric pads.
- ✚ This innovative brush head is very light while being very rigid.
- ✚ The head is made of a carbon fiber reinforced shell filled with solid foam.
- ✚ The sole made of a semi-hard elastomer polymer is rigid, flat and very durable.
- ✚ The non-absorbent sole has a pattern and is very easy to clean after sweeping.
- ✚ The sides of the sole are straight to provide balance during the delivery.
- ✚ The sole design allows sweeping that reduces the usual physical effort.
- ✚ The machined connector (universal joint and stud) attaches head to the handle.
- ✚ The connector will accommodate all handle sizes on its universal stud.
- ✚ The ideal diameter of 27 mm carbon fiber handle is straight, light and resistant.
- ✚ The handle will hold a Timer Buzzer at its end, in place of the tube cap.
- ✚ The universal joint allows a full rotation of the brush up to 30° of the handle angle.
- ✚ The universal joint with friction surfaces ensures no floating head.
- ✚ The sole molded under the shell can accept a cover (pad) for WCF elite competition.
- ✚ The brush is a hybrid so it can be used for recreational curling (without cover) as well as elite competition (with cover), about 2% of athletes.
